

IXL Learning Renewal

IXL Program

Currently used at the Upper Elementary and Middle School levels as a supplemental resource.

We monitor student data for Math and ELA as part of our Technology Plan.

Data Monitoring

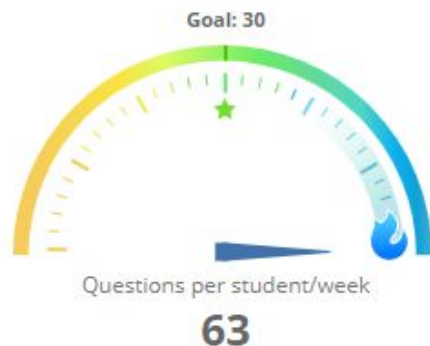

Goal 1: 15 questions per week

Goal 2: 30 questions per week

*Correlate with student assessment growth and achievement data.

IXL EFFECT

Questions per student per week across district

Schools across the United States are experiencing the IXL Effect, and you can, too. Research shows that answering at least 15 questions per week has a measurable impact on student outcomes.

Already meeting that goal? Aiming for 30 or 65 questions per week has been shown to have an even bigger impact on student success.

SKILL GAINS

Skill gains across district

IXL's SmartScore is based on a proprietary algorithm that combines accuracy, consistency, and question difficulty to authentically gauge student mastery of a topic.

Research shows that striving toward mastery (a SmartScore of 100) is the most effective way to drive student growth on state assessments. Mastery isn't the only goal that impacts learning, however. Achieving proficiency (a SmartScore of 80+) has also been proven to lead to improved student outcomes.

TEACHER ENGAGEMENT

Percentage of teachers active across district

85% of teachers active
(22 of 26 teachers)

IXL is not just for students; it's a powerful tool that can make your teachers more efficient and effective. Monitoring teacher engagement helps you see which teachers are maximizing the benefits of IXL in their classrooms.

If teachers are using IXL regularly, you can feel confident that student learning outcomes will grow and accelerate throughout the school year.
