Yes		No	I believe when we bring students back to school, all students need to follow the same plan for in person learning (ie follow an A/B hybrid schedule) to allow families the ability to send all of their students back in person if they wish. The proposed 2 1/2 hour elementary day puts more students in classrooms at the same time and will not allow for proper social distancing at all. The entire district should be on the same schedule.

Yes		Yes	
No	2.5 hrs is not enough time for the lower grades to get in person. It needs to be a full day. The plan is nothing more than an e learning camp that the district offered to parents to pay for through the Y. The younger children need full days in a school setting. Why not offer assistance to all children for full days, to allow those that cannot afford e learning camps from the Y or such facilities? The plan needs to be fair to all and not selected individuals.	No	The board will never pass this, so why support it? It would be dangling another sense of hope in front of parents just to nip it away. Also, the younger children need more than 2.5 hrs of learning to make returning to school worth it to families with two working parents. Without full days it will create more frustration and issues with children's behaviors. The plan has to be full days.

Yes	I would like to see county metrics decreasing, but I will leave that decision to the Boone County Health Dept.	No	I believe there needs to be further discussion of the larger phases of implementation as some may have changed with the delay of phase 1 due to metrics. Perhaps even a quicker return if metrics are favorable.
Yes	I agree with the 2 pre-phases if we follow through with a teacher & paraprofessional survey (whole-district) so that they have a voice in the plan as we discussed at the meeting because their daily schedules will be impacted.	Yes	If the health department uses the school metrics that they have on their website & that are listed in our return to school metrics slide show and adhere to them, then I would agree after the above mentioned survey results have been reviewed by teachers and paraprofessionals. Staff shared with me that they must have input so that they can make an informed decision as to whether they feel safe returning if the health department changes their metrics parameters.
Yes		No	I believe we should wait until their is either a proven treatment or safe effective vaccine before we return to in person learning.
No	If only 10% of the whole building population is allowed to come back, that means not all teachers will have students to come back to teach. This not a fair arrangement for all teachers. Also, this means that for the 90% of students not coming back, teachers will have to rearrange their whole schedule. How is this fair to those students, teachers, and parents? This is not ideal to be utilizing the teachers for this plan. I would be more inclined to agree if specials teachers and paras/TA's are being utilized for this plan. This way, the major of other students won't be affected by a new schedule to accommodate only a few (maybe even just one) student/s. This plan leaves a lot of students out of the equation that do need to come back but don't fit the "matrix" to return under this plan.	No	I believe we need a more aggressive plan to get students back sooner and on a larger scale. Per Winnebago Health Department, they have seen less than a 1% transmission rate within the school setting. North Boone doesn't have nearly the same amount of students as Winnebago County or even Belvidere, we need to look at our community only and do what's best for North Boone. With the low number of testing being done in Boone County, the positivity rate is skewed. I believe we are doing our students an injustice if other metrics are not being looked at.

If we have the support of the Boone Co. Health Dept., do you support the Targeted Assistance Plan presented at the R.T.S. committee meeting on 11/2/2020?	If no, please explain.	If we have the support of the Boone Co. Health Dept., do you support the return to school plan (phases 1-4) that was presented at the R.T.S. committee meetings 10/26/2020 and 11/2/2020?	If no, please explain.
No	Our county is currently at 20%, our staff is currently getting hit on a regular basis for quarantine or isolation. When multiple staff members of a grade level or building are out - we have no plan for coverage. I would feel much better knowing what the actual coverage plan would be - as subs are difficult to find in this district in a non-pandemic situation. When asked about the return to school, the staff who I represent felt that between our incredibly high positivity rate and the lack of substitute plan, they did not support this plan, so I must vote no - for them.	Yes	As these phases are contingent on positivity percent, this plan is easier to support.
No Yes	Many teachers feel this plan is too disruptive to the current remote learning plan that they are using. Most teachers are using that flex time (8:00-9:00) to teach groups of students. All feel that with the positivity rate rising in the county that they do not want ANY students in the building at this time. They feel we need to follow the metrics of the Health Department.	Yes Yes	All teachers are comfortable with this plan when the metrics allow. We can't go against the Health Department in their words.
No Yes	Most teachers in my building support the plan but don't support starting the plan now when numbers are so high in the county. I personally support the plan 100%.	No Yes	Again, most teachers support the plan but have great concerns with Boone County is hovering around a 20% positivity rate.
No	I have not received enough feedback from the support staff members to fully support this plan.	No	The feedback from the support staff is that they would like to continue to follow the Boone County Health Dept Metrics
No	With the support of the BCHD, we support the plan itself just not the timing of initiating it. We believe it is a safe plan that allows us to follow all of the guidance. However, with the current school and county metrics we have concerns about the health and safety of staff and families. We also have concerns about the amount of staff that are on quarantine/isolation and not able to be in the buildings currently due to the high rates of COVID in our community.	No	Similar to what was stated above, if the Boone County Health Department supports this plan we do support the plan itself. Again, the timeline is what we cannot support due to the local metrics. It would be best to implement this plan when the metrics improve.

If we have the support of the Boone Co. Health Dept., do you support the Targeted Assistance Plan presented at the R.T.S. committee meeting on 11/2/2020?
