

Athletic Equipment Storage Issues:

The issue that the District has is that it does not currently have enough storage space for the High School outdoor athletic equipment, whether it be Spring or Fall sports.

Recommendations:

A) Take the Grounds/Maintenance Building and make it the Athletic equipment storage building.

Pros:

- 1) It is centrally located and does have enough room for everything.
- 2) It does have water, electricity, and heat.
- 3) It may also be utilized as a halftime meeting area for the Football teams.

Cons:

- 1) The District will then need to build a new Facilities/Maintenance/Grounds Building in a new location. This will also need all amenities and utilities.
- 2) Cost of a new building.
- 3) There is a lead time on the approval and completion of the project. It is not an instant solution.

B) Build another, smaller storage building on the West side of the Grounds/Maintenance Building.

Pros:

- 1) It would be centrally located for all sports.
- 2) Electricity and water could be added from the adjacent building.
- 3) It may also be utilized as a halftime meeting area for the Football teams.

Cons:

- 1) The District would need to build the building.
- 2) Cost of a new building.
- 3) There is a lead time on the approval and completion of the project. It is not an instant solution.

C) Purchase or rent storage containers for each sport (this would be a total of 4 or 5)

Pros:

- 1) It is a quick solution to the problem.
- 2) It would be a cheaper solution.
- 3) They are portable, if necessary.

Cons:

- 1) The aesthetics/look of the container/pod.
- 2) They could be rented or purchased.
- 3) They are not a permanent structure.
- 4) Security. Who will have key access?
- 5) No electricity for lights.
- 6) Who would be responsible for the units?
